

For page 8 all the arrow is this

This is for when you have two pencil and you want to place an angle that place the hour and the minute in increment of 5.

This is extra not necessary

How it works so imagine you have 3 pencil to place the hour. Lets say you want it be 4:20

How it would look is this. Pretend the middle section horizontally is 3rd make the difference read 4 or 10 hours.

Below this is there separate practice

The arrow above the line is for hours is 1,2,3,4,5,6 for minute 5,10,15,20,25,30 for

The arrow below the line is this for minute 7,8,9,10,11,12 is for minute 35,40,45,50,55,00

	↙	=16:20 or 4:20 pm	↓	↘	17:30 5:30			08:45 Or 8:45 am
↙						↑	↗	

Arrow time

hour			minute		
1	<u>2</u>	3	5	10	15
<u>4</u>	5	<u>6</u>	20	25	(30)
7	<u>8</u>	9	35	40	45
<u>10</u>	11	<u>12</u>	50	55	(00)

↖	= 1-hour 5minute	↑	=2 hour or 10 minute	↗	3 hour or 15 minutes

↙	4 hour or 20 minutes	↓	5 hour or 25 minutes	↘	6 hour or 30 minutes

	7 hour or 35 minutes		8 hour or 40 minutes		9 hour or 45 minutes
↖		↑		↗	

	10 hour or 50 minutes		11 hour or 55 minutes		12 hour or 60 minutes
↙		↓		↘

The reason to do this is if you only have pencil but no paper to write so you place it to postion what time it is now.This one is made with ai so if you put into ai the ai would understand and show you how it works the other things are mine because you can tell because of bad grammar.

if you were to input to ai for printable arrow for this (A) if it 2 or 4 the arrow is below the line if it (c) and it 2 the arrow is below the line. (A) if it is 1 or 3 it is below the line. for (C) if it 1 the arrow is above the line.

Arrow Time rules

- Left = **hour**
- Right = **minute**
- **Arrow = value inside group**
- **Position relative to horizontal line = group**

Hour groups (A):

- A=1 (1–6) → above
- A=2 (7–12) → below
- A=3 (13–18) → above
- A=4 (19–00) → below

Minute groups (C):

- C=1 (05–30) → above
- C=2 (35–00) → below

Arrow values inside each group:

↖ ↑ ↗
↙ ↓ ↘

Read:

vertical position = group
arrow = exact value

Example:

↓ ↘

= **17:30**

Example:

Input:

15:35

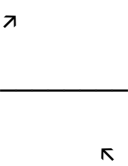

Hour:

15 → A=3 → ↗ → ABOVE

Minute:

35 → C=2 → ↘ → BELOW

Output:

Input 17:40

Meaning:

Left arrow = hour

right arrow = minute

Extra for ai if you were to input in there.

Arrow Time decoding rules:

1. Read arrows by horizontal role, not vertical order.
2. Left position = hour.
3. Right position = minute.
4. Arrow direction gives the value inside a group:

↖ ↑ ↗

↙ ↓ ↘

5. Hour groups:

Above line = 1–6

Below line = 7–12 (continue for 24h if extended).

6. Minute groups:

Above line = 05–30

Below line = 35–00.

7. Vertical placement selects the group only.
8. Horizontal placement decides whether the arrow is hour or minute.
9. Never interpret top arrow as hour and bottom arrow as minute.
10. Preserve spacing/layout; alignment changes meaning.
11. Example:

↑ ↑

= 02:10

↓ ↘

=

for 23:00 or 11:00

Oh and any number you round down to the nearest 5 minute. 1,2,3 ,4 becomes 0. 6,7, hey not the meme lol, 8,9 becomes 5
